

NEW FOR 2017

AMS is very excited about the new edition to our equipment fleet. We have added a 55-yard mulch truck. With this new addition we have the capabilities to blow in mulch, topsoil and aggregates. Another thing that we are very excited about is the ability to install roof top gardens. We at AMS are continuously looking for ways to improve efficiencies and save our clients' money. This new service will reduce labor costs, in turn saving our clients' money.

BENEFITS OF BLOWING MULCH

1. Bark mulch blowing provides a smooth and clean application of mulch to your Michigan planting beds. It allows us to spread mulch on virtually any terrain such as steep slopes, hillsides, rooftops and inaccessible or remote areas up to 800 feet away. Most importantly, bark mulch blowing installation can save time and money.
2. Mulch insulates the base of your plants; keeping them warmer in the winter and cooler in the summer. Mulch helps to maintain the soil around your plants, and not all over your yard. Mulch is an easy and inexpensive way to add beauty of your residential or commercial landscaping, by providing a consistent color and texture throughout your landscape.
3. One of the most important attributes of mulching is the long-lasting affect it has on the health and protection of the soil, trees, plants and flowers it shields and safeguards. Mulch protects soil from baking and drying out, by altering the soil temperature and serving as an insulator to accommodate the surfaces needs in both summer and winter seasons. It also serves in the reduction of soil compaction by acting as a buffer layer from heavy rains, equipment and people. Mulching is extremely important in reducing the growth of weeds and other soil-borne diseases from intruding plants. Mulch also adds nutrients to the soil which helps improve the soil structure and plant growth. One of the best advantages of mulching is its ability to retain soil moisture allowing water to penetrate the soil, reduce evaporation, prevent erosion and drought and minimize the need for manual watering. This is especially crucial in times of dry weather and as an effort to reduce manual labor.
4. Hardwood, softwood, colored wood, and playground is all applied effortlessly, and the smooth, professional look is unrivaled. With the remote control, the volume of the output can be adjusted quickly to minimum flow for spreading around delicate flowers or turned up higher in more wide open areas. We can apply at least 20 to 50 yards per hour. No job is to large.
5. Delicate landscapes can be easily accessed where heavy equipment, wheelbarrows or a crew could cause damage.

Make a long-term improvement for your business by choosing AMS as your mulch installation vendor. Try us once and you will never want to go anywhere else.

Client Testimonial

“I just wanted to say you and your team have provided outstanding services for us this past year.”
